Tower system

The automatic shelf system optimally utilizes the floor space of an object.

The tower system can be designed as above-ground or underground system or as a combination of both variants.

- Elevator for vertical transport
- Optional turning unit
- Vehicle height variable
- Different level height possible
- Up to 15 parking levels
- One to four cars per parking level
- Floor loads per parking space: 2500 kg
- Higher loads per parking space possible upon request
- Variable car dimensions upon request

Please note the separate technical information.

Shaft design

- For 1–15 levels
- Transfer cabin arranged centrally above the lift
- Parking levels with different heights for variable vehicle heights
- Two-row arrangement maximum possible

- In case of a two-row arrangement, one empty space per vehicle height for moving purposes
- Turning unit optional (in transfer cabin or in system)

Shaft design

Electrical cabinet

Close to the transfer cabin room for an electrical cabinet is to be provided.
Minimum dimensions:
l: 240 cm, w: 200 cm, h: 230 cm.

Height dimensions

levels	all levels for vehicles up to 160 cm			3 levels for vehicles up to 200 cm		
	H1	H2	car height	H1	H2	car height
1	337	172	160	377	212	200
2	509	172	160	549	212	200
3	681	172	160	761	212	200
4	868	172	160	948	172	160
5	1040	172	160	1120	172	160
6	1212	172	160	1292	172	160
7	1384	172	160	1464	172	160
8	1571	172	160	1651	172	160

- The dimension is increased by 25 cm, if a turning unit is integrated on a parking level or a transfer cabin is used.
- If a turning unit is integrated on a parking level, the dimension is increased depending on the vehicle length.
- Only valid for standard vehicle dimensions and a maximum of 8 levels.
- The dimension may vary depending on the desired vehicle widths, weights, optional turning inside the system and the number of levels.

Tower design

- For 1–15 levels
