Global Lift Equipment Limited established in 1994, offer an extensive range of design and supply services to the lift industry. Through our philosophy of offering all round solutions to our Customers we demonstrate cost effective, innovative equipment supply to accommodate standard and bespoke applications. With our Headquarters in Flint, North Wales and Trade Counter pick up facilities in London & Dublin, we are well placed to serve the UK and Ireland.

With our excellent in-house design team and strong long term partnerships with our specialist manufacturers, we offer a full range of equipment for repair, modernisation and new lift applications.

We are a UK Company, understanding the different needs and demands which the UK Lift Industry brings. Many would agree that whilst we all work to EN Standards, the UK has "additional demands" which sets us apart from our European neighbours. Our years of experience ensures that we deliver to the high expectations set throughout our industry.

Working on a one to one basis, ensures that all projects are dealt with accordingly, optimising the level of input required from initial enquiry through to after sales.

Research & development remains a priority as we continue to enhance and develop products specifically designed to satisfy the criteria listed by the UK's leading Consultants and Specifiers.

We offer equipment solutions to the Lift Contractor enabling them to give high quality, fully compliant, on-time assurances to their Client. This philosophy is applied equally across the range of Independent Lift Contractors through to the Multi-Nationals who all have differing demands on their Lift Equipment Suppliers.

In an ever changing market place, the number of equipment suppliers is continuing to rise which creates an opportunity for choice across our Industry. At Global Lift Equipment we are very aware that the product itself is only one key element of your supplier selection process. Our strength lies in our highly skilled staff who are all committed to ensuring that customer satisfaction is paramount.

We would welcome the opportunity to work with you.
